

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (canceled)

Claim 2 (currently amended): A portable audio listening apparatus comprising:

a transmission apparatus and a portable receiving apparatus electrically and mechanically structured as different units,

the portable transmission apparatus comprising:

means for generating an audio modulated signal modulated in a band in which a signal is transferred by using a human body of a single user, wherein the audio modulated signal is generated based on stored audio data; and

a first electrode for outputting the generated audio modulated signal, and

the portable receiving apparatus comprising:

a second electrode for receiving the audio modulated signal transferred through the first electrode and then through the body of the single user;

means for demodulating the audio modulated signal received by the second electrode and downloading said demodulated signal into said audio listening apparatus for storage; and

means for generating audible sound according to the stored demodulated signal;

wherein said second electrode is adapted to receive the audio module signal sent from an audio-signal transmission apparatus, wherein the portable receiving apparatus further comprises a transmitter for transmitting a second audio modulated signal through the body of the single user; and wherein the portable audio listening apparatus includes a second portable receiving apparatus, wherein the second portable receiving apparatus includes:

a third electrode for receiving the second audio modulated signal transferred through the body of the single user;

second means for demodulating the second audio modulated signal received by the third electrode; and

second means for generating audible sound according to the demodulated second audio modulated signal.

Claim 3 (original): A portable audio listening apparatus according to claim 2, wherein the transmission apparatus further comprises means for storing individual authentication data.

Claim 4 (previously presented): A portable audio listening apparatus according to claim 2, wherein the receiving apparatus further comprises means for storing individual authentication data.

Claim 5 (canceled)

Claim 6 (previously presented): A portable audio listening apparatus according to claim 5, wherein the portable receiving apparatus includes playback means for playing back an audio signal to be modulated and control means for controlling the playback means, wherein the playback means accommodates a detachable recording medium and reproduces an audio signal from the recording medium.

Claim 7 (previously presented): A portable audio listening apparatus according to claim 2, wherein the receiving apparatus further comprises recording means for recording an audio signal in a predetermined form, said receiving apparatus receives, by an electrode, an audio modulated signal transferred from a predetermined another transmission apparatus by using a human body, and demodulates the received audio modulated signal and records it in a predetermined recoding form by using the recording means.

Claim 8 (original): A portable audio listening apparatus according to claim 7, wherein the frequency band of an audio modulated signal transmitted by the transmission apparatus is made different from that of an audio modulated signal transmitted by the predetermined another transmission apparatus.

Claims 9-10 (canceled)

Claim 11 (previously presented): A portable audio listening apparatus according to claim 5, wherein the third electrode, the second demodulating means and the second audible sound generating means are incorporated into a headphone.

Claim 12 (previously presented): A portable audio listening apparatus according to claim 5, wherein the third electrode is at least one ear pad on the headphone.
